Patent No. 632332

GENERAL INFORMATION:
APPLICANT: WANG, MACLIANG
APPLICANT: WHICK, MOBERT
APPLICANT: WHICK, MOBERT
APPLICANT: LEE, LIHSYNG S.
ITILE OF INVENTION: CAPABLE OF GLYCOSYLATION, PRODUCTION AND USES THEREOF
NUMBER OF SEQUENCES: 33
CORRESPONDENCE ADDRESS:
ADDRESSEE: STERNE, KESSLER, GOLDSTEIN & FOX P.L.L.C.
STRRET: 1100 NEW YORK AVE., NW, SUITE 600
CITY: WASHINGTON
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2,

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                 1;
                                                            ARTIS725-35 are DNA mols. encoding a monoclonal antibody or a binding fragment. MAbs were produced by using insect guts, partic, insect bursh border membranes (BBMS), esp. corn roctworm, as antigen; insultigen a donor animal with the antigen; isolating immunocompetent B cells from the immunised animal; fusing B cells with a tumour cell line; isolating the fused cells, culturing them and cloning positive hybrid cells; and screening the hybrid cells for prodn. of the required MAbs. The MAbs bind to the gut of a target insect but do not bind to mammalian BBMs. The DNA sequence can be operably linked to a toxin molety, esp. selected from e.g. Bacillus toxins, pseudomonas exotoxin and phytolaccin, etc. The Abs are useful for control of insect pests, e.g. Coleoptera, Diptera, Hymenoptera and Lepidoptera. The pesticidal compsn. is pref.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          fragment. MADS were produced by using insect guts, partic. insect brush border membranes (BBMs), esp. corn rootworm, as antigen; brush border membranes (BBMs), esp. corn rootworm, as antigen; minuminishing a donor animal with the antigen; isolating immunocompetent B cells from the immunished animal; fusing B cells with a tumour cell line; isolating them and cloning positive hybrid cells; and screening the hybrid cells for prodn. of the required MADS. The MADS bind to the gut of a target insect but do not bind to mammalian BBMs. The DNA. sequence can be operably linked to a toxin molety, esp. selected from e.g. Bacillus toxins, Pseudomonas exotoxin and phytolaccin, etc. The ADS are useful for control of insect pests, e.g. Coleoptera, Diptera, Hymenoptera and Lepidoptera. The pesticidal compsn. is pref.

                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The patent discloses a novel retroviral vector, particularly Spleen
Necrosis Virus (SNV) vector, having target cell specificity. The vector
has a targetting envelope which is a chimeric protein consisting of an
antigen binding site of an antibody (e.g. anti-DNP-scFv) or another
carboxy terminal part of the retroviral envelope protein, fused to the
carboxy terminal part of the retroviral envelope protein. The presence
of the wild type envelope protein serves as a helper molecule to
improve or supplement a functional membrane fusion domain. The
carboxinal vector is used for cell specific gene transfer,
carboxinal vector is used for cell specific gene transfer,
cspecially in gene therapy. The invention overcomes the restricted host
range limitation of retroviral vectors. The present sequence is a gene
cencoding anti-Herzneu single chain antibody (scA). This sequence was used
in the construction of plasmid pAJ7 which contains a tagetting vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

monoclonal antibody (MAD) 284, which immunoreacts with a lead cation. The sequence was derived from RNA isolated from hydridoma cells from mouse spleen cells. The protein can be used for binding heavy metals, such as lead cations. It can be used for detecting, removing, adding or neutralising the heavy metals in biological and inanimate systems. It can be used in e.g. aqueous liquid; systems, in biological or environmental systems or in such compositions as perfumes, cosmetics, pharmaceuticals, health care products; skin treatment products, pesticides, herbicides, asolvents used in the production of semi-conductor and integrated circuit components and production materials
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cosmetic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA encoding heavy metal binding polypeptide sequences - used for detecting, removing, adding or neutralising heavy metals, such as lead cations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence encodes the heavy chain variable region for

Acid-resistant microorganism; detection; faecal; intestine; infection; monoclonal antibody; heavy chain; ds.
                                                           The present sequence encodes the heavy chain variable region for monoclonal antibody (MAD) 6F5, which immunoreacts with a lead cation. The sequence was derived from RNA isolated from hydridoma cells from mouse spleen cells. The protein can be used for bliding heavy metals, such as lead cations. It can be used for detecting, removing, adding or neutralising the heavy metals in bological and inanimate systems. It can be used in e.g. aqueous liquid systems, in biological or environmental systems or in such compositions as perfumes, cosmetics, pharmaceuticals, health care products, skin treatment products, pesticides, herbicides, colvents used in the production of semi-conductor and integrated circuit components and production materials
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GGATTCACCTTCAATAACTACGCCATGAATTGGGTCCGCCAGGCTCCAGGAAAGGGTTTG 135

This invention describes a novel method for the detection of a mammalian infection by an acid-resistant microorganism (A) by treating a faecal sample with at least two different monoclonal antibodies (MAb) (or their fragments or derivatives) or aptamers (collectively (I)) and detecting formation of a complex (C) between (I) and the corresponding antigen of formation of a complex (C) between (I) and the corresponding antigen of (A). The first and second (I) bind to epitopes of different antigens (Ag). These epitopes are present, after passage through the intestines, in at least some mammals, and have either: (I) their native structure; or (II) a structure against which an antibody is produced by an animal infected or immunized with (A), or its extract, lysate, derived protein cor fragment, or with a synthetic peptide. Practically all mammals display at least one of the specified epitopes. The method is used to detect infection by acid-fast bacteria, particularly of the genera Helicobacter, Mycobacterium and campylobacter, specifically H. Pytori, H. hepaticus, M. tuberculosis, C. jejuni and C. pylori. (I) may also be used therapeutically. The method is direct and non-invasive, and provides an inexpensive and easily standardizable diagnosis, despite possible sequence encodes the H. Pylori & Choms. Accesses the H. Pylori & Sequence encodes the H. Pylori & Choms. Accesses the H. Pylori & 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1;
                                                                                                                                       Detecting infection by acid-fast microbes for diagnosis of Helicobacter pylori, comprises reacting a faecal sample with two binding reagents for

The patent discloses a humanised antibody or its antigen-binding fragment, having binding specificity for CC-chemokine receptor 2 (CCR2), comprising an antigen binding region of non-human origin and at least a portion of an immunoqiobulin of human origin. The humanised antibodies are useful for inhibiting the interaction of a cell expressing CCR2. They are useful for inhibiting or treating HIV infection. The proteins of the invention are useful for inhibiting leukocyte trafficking, for treating CCR2-mediated disorders such as inflammatory disorder, autoimmune disorders such as rheumatoid arthitis and multiple sclerosis, atherogenesis and atherosclerosis, and for inhibiting restenosis. They are useful in therapy or disgnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Humanized immunoglobulin for treating a CC-chemokine receptor 2-mediated disorder in a patient, comprises a binding specificity for CCR2, and a non-human antigen binding region and human immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         O'Keefe T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     neuroprotective; immunosuppressive; human immunodeficiency virus; neprotective; immunosuppressive; human immunodeficiency virus; inflammatory disorder; autoimmune disorder; rheumatoid arthritis; shock; multiple sclerosis; atherogenesis; atherosclerosis; restenosis; atherogenesis; atherosclerosis; allograft rejection; anaphylaxis; malignancy; inflammation; stenosis; allograft rejection; fibrotic disease; angloplasty; acquired immune deficiency syndrome; AIDS; inflammatory glomerulopathy; vascular intervention; neolintimal hyperplasia; antibody 1D9 heavy chain; 1D9RHA; ds.
             disease. They are also useful for treating allergy, anaphylaxis, malignancy, chronic and acute inflammation, histamine and IgE-mediated allergy. reaction, shock, stenosis, allograft rejection, fibrotic disease, asthma, inflammatory glomerulopathies, acquired immune deficiency syndrome (AIDS), restenosis associated with vascular intervention, including angioplasty and/or stent placement in a mammal. Humanised antibodies are also useful for inhibiting narrowing of the lumen of a vessel in a mammal, and inhibiting neointimal hyperplasia of a vessel in a mammal, preferably associated with vascular intervention. The present sequence is a DNA encoding murine antibody ID9 heavy chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          humanised antibody; CC-chemokine receptor 2; CCR2; nephrotropic;

The patent discloses a humanised antibody or its antigen-binding (Tragment, having binding specificity for CC-chemokine receptor 2 (CCR2), comprising an antigen binding region of non-human origin and at least a portion of an immunoglobulin of human origin. The ca cell expressing CCR2. They are useful for inhibiting or treating a cell expressing CCR2. They are useful for inhibiting or treating the interaction of a cell expressing CCR2. They are useful for inhibiting or treating correction. The proteins of the invention are useful for inhibiting in the manufacture of an edicament of the arthritis and multiple sclerosis, atherogenesis and atherosclerosis, and for inhibiting restenosis. They are useful in therapy or diagnosis, and in the manufacture of a medicament for treating allergy, anaphylaxis, and in the manufacture of a medicament for treating allergy, anaphylaxis, malignancy, chronic and acute inflammatory glomerate allergy, anaphylaxis, malignancy, chronic and acute inflammatory glomerate allergy reaction, shock, stenosis, allergy eff rejection, for including angioplasty and/or stent placement in a mammal. Inflammatory danger are also useful for inhibiting narrowing of the lumen of a vessel in a mammal, preferably associated with vascular intervention. The present sequence ls a DNR encoding humanised murine antibody heavy chain region, 1DSRHA. 1DSRHA sequence consist of the complementarity contains antibody heavy chain region, 1DSRHA sequence consist of the complementarity contains the formal contains an intervention.
                                                                                                                                                                                                                                                                                                                                                                                                 Humanized immunoglobulin for treating a CC-chemokine receptor 2-mediated disorder in a patient, comprises a binding specificity for CCR2, and a non-human antigen binding region and human immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 TCATGTGCAGCCTCTGGATTCACCTTCAATAACTACGCCATGAATTGGGTCCGCCAGGCT 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a monoclonal antibody (MAb) (I) that binds to a human breast cancer antigen that is also bound by MAb 454C11 and 520C9 (produced hybridoma ATCC HB8484 and HB8696, respectively). Also described is a hybridoma that produces (I). (I) is useful in specific binding assays, affinity purification, drug or toxin targeting, imaging, and genetic or immunological therapeutics for various cancers. The present sequence encodes a VH domain derived from a 263 hybridoma, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Monoclonal antibody capable of binding to human breast cancer antigen useful for affinity purification, drug or toxin targeting, imaging, and

The sESTs can have a range of activities depending on the tissues they were isolated from. The activities include: chemotractic; proliferative; immunomodulatory; haematopolatic; enhances chemotractic; antibacterial; antibugal; antiviral; antibabatic; antibacterial; antilingal; antiviral; antidiabetic; antibacterial; antilingal; antiviral; antidiabetic; antipartiparkinsonlan; antipartiatic; cerebroprotective; anticonyulsant; and antidepressant. The sESTs can be used for gene therapy and in vaccines. The sESTs are useful as probes for the

             molecules which correspond to the SESTS. Proteins encoded by the SESTS are useful in assays for determining biological activity and raising antibodies. They may be useful for treatment of autoimnume disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, osteoporosis, osteoarthritis, central nervous system disorders (Alzheimer's, Parkinson's, Huntington's disease, stroke), coaquiation disorders (haemophilla, thrombosis), inflammatory disorders (Crohn's disease, tumours, bacterial, fungal or viral infections, depression and psoriasis. AAA45926 to AAA4591 represent linker variants which are given in the exemplification of the present invention.

for identifying nucleic acid sequences (NAS), which encode for identifying nucleic acid sequences (NAS), which encode for identifying nucleic acid sequences (NAS), which encode polypeptides capable of interacting with at least 1 of their fellow polypeptides. This comprises: (a) providing a lst library of recombinant vectors containing genetically diverse NAS comprising a recombinant vectors containing genetically diverse NAS comprising a variety of NAS encoding polypeptides capable of interacting with carriety of NAS encoding polypeptides capable of interacting with carriety of NAS encoding polypeptides capable of interacting with carriety of NAS encoding polypeptides capable of interacting with carriety of NAS encoding polypeptides capable of interacting with carriety of NAS encoding polypeptides of and/or recombinant vectors and/or recombinant inserts used in steps (a) and (b), upon the interaction of a polypeptide from the librarie a displayed by the vectors and/or recombinant inserts used in steps (a) and (b), upon the interaction of a polypeptide from the libraries of the libraries of recombinant vectors or nucleic acid sequences of (a) and (b). In sectable property; (c) expressing members of the libraries of appropriate host cells so that at least 1 interaction is established; and (d) selecting for the generation of the screenable or selectable property representing the interaction of the interaction of the screenable or selectable property representing the interaction of the interaction of the interaction of the server of the interaction of the interaction of the screenable or selectable property representing the interaction of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1890 TCCTGTGTTGCCTCTGGAATCACTTTCAGTAATTACCGGATGAACTGGGTCGCCCAGTCT 1949

The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of alignosis in human subjects e.g. to determine the presence of adipocyte antipon on the surface of an adipocyte to detect or determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese antibodies can be used as an alternative means of treatment for obese for different types of fat deposits can also be produced e.g. intra-abdominal fat associated with heart disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related diseases

The invention relates to a method of modulating insulin activity in mammalian cells by administering a peptide that binds the insulin receptor (IR). A composition containing a peptide, optionally expressed from gene therapy vectors, that binds to Site 1 of IR and an insulin agonist are useful for trating diabetes. Also, peptides that are antagonists of the insulin-like growth factor (IGF-1) receptor are useful for treating insulin-like growth factor (IGF-1) receptor are useful for treating insulin-like growth factor (IGF-1) receptor are useful for treating neurological diseases, including stroke and diabetic neuropathy. The peptides are also useful in screening for compounds that bind to IR or IGF-1 receptor, potential therapeutics and research reagents. ABK47246-ABK47277 represent IR and/or IGF-1 receptor DNA sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Modulating insulin activity in mammalian cells, for treating e.g. diabetes and tumours, comprises using peptides that bind to insulin or insulin-like growth factor receptors '-

The sequence was derived from RNA isolated from hydridoma cells from mouse spleen cells. The protein can be used for binding heavy metals, such as lead cations. It can be used for detecting, removing, adding or neutralising the heavy metals in biological and inanimate systems. It can be used in e.g. aqueous liquid systems, in biological or environmental systems or in such compositions as perfumes, cosmetics, pharmaceuticals, health care products, skin treatment products, pesticides, herbicides, solvents used in the production of semi-

```
The invention relates to a multifunctional polypeptide comprising a domain with a binding site that specifically recognises an extracellular group of the NKG2D receptor complex and a second domain which functions as a receptor or ligand. The polypeptide and its associated composition for the treatment of cancer, infections and/or autolimune conditions. The cancer may be a tumour of the head and neck, stomach, largin, therest, oversy, uterus, cervix, prostate, kindrey, testis, thyroid, bladder or brain, or a melanoma, myeloma, sarcoma, leukaemia or lymphoma. The infectious diseases can be caused by viruses, bacteria, fungi, protozoa or helminths. The autolimune diseases include multiple sclerosis, Grave's disease, ankylosing spondylitis, acute anterior uveitis, Goodpasture's syndrome, myasthenia gravis, insulin-dependent autolimune hepatitis. The sequences represent DNA encoding the polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1;
                                 Multifunctional polypeptides comprising binding sites that specifically recognise extracellular groups of the NKG2D receptor complex and domains which function as receptors or ligands, useful for treating

/dove="vector: pSPORTI; site_1: SalI; Site_2: NotI; This
clone is among a rearrayed set of 15,247 clones from 11
embryo cDNA libraries (including preimplantation stage
embryos from unfertilized egg to blastocyst, embryonic
part of E7.5 embryos, extraembryonic part of E7.5 embryos,
, and E12.5 female mesonephros/gonad) and one newborn
ovary cDNA library. Average insert size 1.5 kb. All
source libraries are cloned undidrectionally with Oligo(dT
)-Not primers. References include: (1) Genome wide
expression profiling of mid-gestation placenta and embryo
using a 15,000 mouse developmental cDNA microarray, 2000,

Emall: cgapba-refmail.nih.gov
Tissue Procurement: Dr. Mark Watson
CONA Library Preparation: Rubin Laboratory
CONA Library Arrayed by: The I.M.A.G.E. Consortium (LNL)
DNA Sequencing by: Agencourt Bioscience Corporation
Clone distribution: MGC clone distribution information can be
            Site_2: Ecori; cDNA made by oligo-dr priming.

Directionally cloned into EcoRI/XhoI sites using the
following 5' adaptor: GGCAGGAG(G). Size-selected >500bp
for average insert size 1.8kb. Library constructed by Ling
Hong in the laboratory of Gerald M. Rubin (University of
California, Berkeley) using ZAP-CDNA synthesis kit
(Stratagene) and Superscript II RT (Life Technologies).

Sequence 1, Application US/08442542

Patent No. 5686600
GENERAL INFORMATION:
APPLICANT: Carcial, Michael G.
TITLE OF INVENTION: Antibodies which Bind to Insect Gut
TITLE OF INVENTION: Proteins and their Use
NUMBER OF SEQUENCES: 49
CORRESPONDENCE ADDRESS:
ADDRESSEE: Ciba-Geigy Corporation
STREET: 7 Skyline Drive
CITY: Hawthorne
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              COMPUTER REALABLE FORM
MEDIUM TYPE: FIDOPY disk
COMPUTER: IBM PC COMPATIBLE
COMPUTER: IBM PC COMPATIBLE
COMPUTER: BATEMIN SYSTEM:
CONFRANT SYSTEM:
SOFTWARE: PATEMIN Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
FILING DATE: 16-MAY-1995
CLASSIFICATION NUMBER: US/08/267,641
FILING DATE: 16-MAY-1994
ATTORNEY/AGENT INFORMATION:
NAMME: SPULIAL, WMSTRAY
REGISTRENCE/DOCKET NUMBER: GC 1750:
TELECOMMUNICATION INFORMATION:
TELEPHONE: 919-541-8619
INFORMATION FOR SEQ ID NO: 1:
SEQUENCE CHARACTERISTICS:
LENGTH: 357 base pairs
TYPE: nucleic acid
STRANDEDNESS: single

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 TCATGTGCAGCCTCTGGATTCACCTTCAATAACTACGCCATGAATTGGGTCCGCCAGGCT 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 GAAGTGATGCTGGTGGAGTCTGGTGGAGGATTGGTGCAGCCTAAAGGGTCATTGAAACTC 60
Sequence 22, Application US/09172019
Patent No. 6103889
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Mittlow, Marc
APPLICANT: Hardman, Karl
APPLICANT: Highla, David
TITLE OF INVENTION: Nucleic Acid Molecules Encoding Single-Chain
TITLE OF INVENTION: Antigen-Binding Proteins (As Amended)
NUMBER OF SEQUENCES: 23
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  15;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 738;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Indels
                                                                                                                                                            JOINTESSE: Sterne, Kessler, Goldstein & Fox P.L.L.C.
